# REACT

Emergency Notification System

Choose the level of visibility and control that suits your project. From simple alert notifications to full site intelligence, REACT gives you the flexibility to scale your safety and monitoring needs.

BASIC

REACT basic gives you the essential tools to see what is happening on your site and receive important alerts straight to your phone. It is simple to use, quick to set up and ideal for customers who need reliable notifications without advanced configuration.

Web Portal Features
Clear site visibility

✔ View all your sites on a single map
✔ Group sites by customer if you manage multiple projects
✔ Add users to one or several sites easily
✔ Choose how you receive alerts: push notification, email or both
✔ Access a full activity log for clear traceability
✔ Basic stock management to track devices

Mobile Application Features
Essential alerting on the go

✔ Receive alerts for key WES hardware events
✔ Accept or reject alarms instantly
✔ Add photos, videos or audio to give context to an event
✔ App-raised alerts provide GPS location
✔ View previous events at any time
✔ Raise fire and medical alerts straight from the app

Who is basic for?

Perfect for smaller projects, short-term sites and customers who want easy, reliable notifications without the complexity of advanced settings or configuration.

REACT

REACT gives you complete control and full visibility across your site. With advanced configuration options, detailed location information and powerful integrations, it is designed for customers who need a deeper level of insight and emergency management.

Web Portal Features
Clear site visibility and powerful mangement tools

- ✔ View all sites on a global map
- ✔ Organise and manage sites by customer
- ✔ Assign users to multiple sites quickly and easily
- ✔ Access a full activity log with every event recorded for audit and compliance
- ✔ Track devices across all sites with full stock management
- ✔ Map each device directly onto floor plans for precise location detail
- ✔ Create tailored notification groups for different event types
- ✔ Configure escalation rules, geofencing and schedules to match your site procedures
- ✔ Integrate with external platforms using APIs, including Alarm Monitoring Centres

Mobile Application Features
Essential alerting on the go

- ✔ Receive all WES hardware event notifications
- ✔ Accept or reject alarms instantly within the app
- ✔ Add photos, videos or audio for clearer incident detail
- ✔ App-raised alerts provide GPS location
- ✔ Full event history available for reporting and audits
- ✔ Raise all app-based events, including hazard reporting, SOS and lone worker
- ✔ View precise, map-based locations for every alert

Who is REACT for?

Designed for large construction projects, industrial environments and multi-site operations that need full control, advanced emergency notification workflows and complete site intelligence.

COMPARISON

Choosing the right REACT version for your site
